

Transcendent Pathology

Translational Medicine and Sciences

Research and Development Service Information

Experience Matters

Transcendent Pathology's scientific team has over 120 years of combined experiences in the Biopharmaceutical, Life Sciences and Medical Education sectors.

Our physician scientists have directly worked on numerous drug candidates for a myriad of diseases or conditions including Alzheimer's disease, cancer, obesity, gastroenteritis, muscular dystrophies, hepatitis C, HIV-Aids, SIV, novel medical devices, immunomodulation agents, implants, and prostheses. We also are diagnosticians, and are thus able to diagnose and recommend appropriate therapies in many scenarios. Our unique blend of expertise and ability to work on GLP and non-GLP studies, gives us the agility to ensure quality early in the research process. We use telemedicine, pathology digital media, and medical imaging to communicate with each other and client organizations.

Diagnostic Testing and Training

Clinical Pathology

- Clinical Chemistry
- Hematology
- Urinalysis and Fecal Analysis
- Body Fluids Analysis
- Cytology

Anatomic Pathology

- Gross Examinations
- Microscopic Examinations
- Surgical Pathology
- Molecular Pathology Testing

Specialty Pathology

- Toxicologic Pathology
- Oncologic Pathology
- DART

The mission of Transcendent Pathology is to provide client support with translational and toxicologic pathology research. We assist client organizations in initiation, coordination, strategy, and implementation of biomedical and biotechnology research projects covering multidisciplinary aspects of medical care in the veterinary and human health sectors.
